

Sound That Will Move You.

AR300 WI-FI AUDIO MODULE 2.4GHZ 300MBPS ROUTER MODULE

ORDER CODE: 39894345
AVAILABILITY: IN STOCK

Earthquake Sound is proud to introduce its first Wi-Fi high quality audio module – AR300. With a data rate of up to 300Mbps, the AR-300 is the fastest streaming 2.4GHz Wi-Fi router module on the market!

Designed to work with the free downloadable mobile app, “Earthquake Player” and other open source apps available for Apple®, Android®, and Windows® 7-10 devices. The Earthquake Player app allows the module to stream music from your Wi-Fi enabled devices at high quality 128kbps or super high quality 320kbps. A single Wi-Fi enabled device can stream **10 different songs to 10 different zones at the same time!**

Easily stream Spotify, UPNP/DLNA sources or even AirPlay! Have some audio tracks on a USB drive? That'll work too, simply plug-in your flash drive and enjoy!

The AR-300 also doubles as a Wi-Fi hotspot; expanding the range of the Wi-Fi network that it is connected to. When installing several modules on the same Wi-Fi network, the AR-300 becomes a mesh metric network with massive speed that allows up to 32 zones of high quality audio processing.

The small, stackable design allows it to be charged together with 2 other modules and placed in the most discrete of places.

Specifications

- One-to-one and one-to-multiroom operations
- Magnetic power sharing that can power up to 3 modules
- User privacy settings/password capability
- 3.5mm audio output
- Compact stackable design
- Supports 802.11 b/g/n networks
- Supports 10/100 Mbps Ethernet
- Full access to all music stored in devices connect to the same Wi-Fi network

STACKABLE, MAGNETIC DESIGN ALLOWS YOU TO STACK UP TO 3 AR300S USING ONLY ONE POWER ADAPTER!

Connections

- 3.5mm stereo line-out
- RJ45 LAN port
- 5V Micro USB power port
- Front USB port for local playback and firmware upgrades

In the Box

- Wi-Fi audio module
- Micro USB lead
- 5V USB power supply
- User manual
- 2x RCA to 3.5mm stereo adapter
