TELECONFERENCING FOR DUMB DUMBS BY MIKE SWANN

In Australia and the rest of the world, people are increasingly working from home. In fact according to the ABS (2016), around a third of Australians regularly work from home and that number is increasing.

While these people can patch into the office remotely, head office needs to be the command centre. That means that they need to have a boardroom equipped with a simple teleconferencing system, but what about the costs, simplicity and effectiveness?

Let's set some perimeters.

A total layout of no more than \$10k. Works with most software like Skype of Business. Doesn't require training for things like DSPs or IT expertise. Users can bring their own device, like a laptop, tablet or phone (BYOD) and users require practically no training.

We'll break the system into *microphones, speakers, cameras and monitors*.

THE CAMERA

While it's perfectly fine to use a Logitech webcam, there are more professional options. The Panacast2 is one such option. It features 3x 4K cameras for a full field of view. There are also software upgrades that can do stuff like intelligently track attendees. It can be effectively a PTZ camera without all the drawbacks of a motorised camera.

PANACAST 2 4K PANORAMIC USB CAMERA

Currently the Panacast2 is being cleared. Please call to confirm pricing before quoting any job!

PANACAST2 | 09002086

THE MICROPHONE

We said the teleconferencing setups need to be simple, yet people need to know how to use standard microphones. They need to monitor their distance to the microphone, the angle of the microphone and even pronounce certain words differently, like those beginning with Ps. These are known in the industry as P-pops. So if standard mics are out, then what's the solution?

Array microphones are probably the easiest to use solution and they perform well. They have also dropped dramatically in price thanks to brands like TOA and the Biamp Devio.

The Biamp Devio comes as either a desk mic kit or ceiling mic kit. We generally like the ceiling mic due to cabling considerations and because the mic's out of the way. Once the system calibrates, you shouldn't move the mic. To see how well it works, check out this YouTube: <http://bit.ly/2F00MG>  **Video online**

CONFERRING HUB & CEILING MIC

DEVSCR20T 28657135 **\$3,475**
DEVSCR25T 28657150 **\$3,825**

NEW

The TOA AM1 is similar to the Devio in that its software monitors the speaker's distance and keeps the volume level uniform. It will focus on the speaker, until they have finished talking. Once these happens, it will search out the next speaker and direct its beam at that person. You can view the process on the free software. It works fantastically well.

ACTIVE BEAM STEERING ARRAY MIC

NEW

THE SPEAKERS

You can add either passive or active (powered) speakers to a Devio Hub equipped with a low mono amplifier.

Our highest selling active speakers are the Class5A. They now feature a passive standby feature, so once installed, you don't need to touch a thing.

Conference rooms often use soundbars. We auditioned the Audac soundbar recently. It immediately became our first choice for boardrooms. It's simple, with an inbuilt subwoofer. It can also be installed above or below the TV with the included mounting gear. It has an array of inputs, including Bluetooth for a spontaneous 'boardroom party', but the Vocal mode is most impressive. With the press of a button, it focuses frequencies on the vocal range, eliminating background noise in an instant. It worked so well!

ACTIVE 2.1 SOUNDBAR

IMEO1B | 01931954 ●
IMEO1W | 01931956 ○ **RSP INC \$489**

NEW

We mentioned the TOA AM1 microphone above, but this month we'll see the TOA AMCF1 soundbar. The AMCF1 contains basically an AM1 microphone and is also a soundbar. This has to be the easiest solution for a boardroom, requiring limited install experience, but after playing with the prototype at the Integrate Show, it works well. We expect that boardrooms around Australia will love the performance and simplicity of the AMCF1.

CONTROLLING DEVICES

With attendees bringing their own devices, sharing and collaborating can be complex. The system needs to be wireless, high performance and easy to use. The Airlink002 is our preferred choice.

The Airlink002 is the fastest system for switching and being on the latest Wi-Fi standard, 11ac, it doesn't suffer from the lag of older systems. First time users need to only insert a USB. The laptop will identify the USB, run the program and you're done! With the press of the dongle's button, you can display whatever content is on your computer. It has a million other features, so check out the YouTube video at: <https://bit.ly/2RCZfQm>.

THE MONITOR / TV

The final piece of the puzzle is the display or TV. Each situation is different, but our biggest selling brand is Philips. They have always given us great, on-site warranty support, but now they have caught up and passed their competitors in terms of software. The D-line, like just about all Philips commercial TVs, features Android. Their hospitality software (Command) is powerful, but the "run of the mill" digital signage software, called Fusion, is being used for so many cool applications. With the D-line, you have a well priced, commercial TV, but when the TV is not in use, you can schedule the images or videos that help push your corporate message. If you have TVs around the country, then they can be grouped together and controlled from one location. This is literally the tip of the iceberg, with Philips promising us an in-store demo unit, so that we can explain it further, face-to-face!

SWITZERLAND'S AXING - A WORTHY REPLACEMENT FOR SPAUN

When it comes to professional MATV solutions, Spaun was widely regarded as the best manufacturer in the world. Unfortunately, after 50 years of business, the German manufacturer recently announced that they are entering into insolvency proceedings.

We were shocked by the news. We supply many of the best MATV installers in the industry and they all

use Spaun product for everything from skyscrapers to hospitals, so we need to find a replacement ASAP!

The best replacement was Switzerland's Axing. In our testing, it outperformed all of the most popular names in industry by a good margin.

As an example, the 38dB amplifier (ATSP38) returned a MER that was a good 1.5dB above one of the most

reputable brands in the industry. We were told to test it by feeding in a nice ~60dB clean terrestrial TV signal, but we thought it would be more fun trying to break it. We got a nice clean output from a ~40dB input (~80dB output), right up to nearly 107dB, when quality started to drop. We were ecstatic about finding a worthy replacement for Spaun!

THE FIRST STABLE 4K MODULATOR ON THE MARKET

Resi-Linx are replacing the industry's most popular modulator, the HD1603, with a new "4K" modulator, the Q4K-R1.

We chose to use inverted commas because it accepts a 4K signal and will pass-through that same signal, however modulated signal is still limited to 1080p. This is due to limitations with TV tuners.

We have been testing the new Q4K-R1 for months now. While the Q4K-R1 is not the first 4K modulator on the market, it's the first stable 4K modulator. Like the HD1603, the Q4K-R1 supports Resi-linx IR targets and emitters. Resi-linx are the market leader in both IR and modulation and the only brand to have Foxtel approved product in both fields.

ADD INTEREST AND FUN TO YOUR EXERCISE & SPORTING ACTIVITIES

8GB WATERPROOF BLUETOOTH AQUA BUDS

LOSSLESS FLAC SUPPORT & 10 HRS BATTERY

- AQB18BLK | 08850018
- AQB18BLU | 08850015

The AQB18 is one of the most durable headphones on the market with an unsurpassed IPx8 rating. This means that joggers can sweat as much as they like and simply rinse the headphones under water after use.

The AQB18 can also be used while swimming. Since Bluetooth doesn't transmit under water, you need only drag-and-drop the files on to the internal memory (8gb) and you'll be ready to go.

The charging clip on the AQB is unique. It makes the AQB perfectly sealed, yet super easy to charge.

The final aspect is performance. They are highly sensitive, meaning you will never need to go to full volume. The oversized drivers deliver huge bass. The final vital ingredient to a sporting headphone is comfort. The AQB is guaranteed to be the most comfortable sporting headphone that you've ever used. It will stay perfectly in place even during the most rigorous exercise. For joggers that prefer to remove headphones at busy streets, you need only flick forward the earpiece. Once you cross the street, you can flick the earpiece back in your ear.

DENON

PRECISION. CRAFTSMANSHIP. INNOVATION.

Denon's Japanese-made flagship AV amplifier, the AVCX8500H, has finally landed at Radio Parts! This beast is pretty unique, being the first full 13.2 channel amplifier on the market. Each channel is discretely driven, weighing a hefty 23kg. This gives us the option of selecting between a 7.2.6 or 9.2.4 Dolby Atmos configuration. These options should suit both larger rooms as well as the ultimate immersive experience for hardcore AV aficionados!

Some months ago, we auditioned one of the first domestic IMAX demos. The presenter brought along a "handmade" IMAX demo disk. This was feed into Panasonic's flagship Blu-ray player, via the Denon AVCX8500 to 3 dedicated power amps. These power amps were similar to the Earthquake Cinenova. The results from the 7.4.6 demo room was nothing short of incredible!

EACH MONTH ONE OF OUR SALES REPS RECOMMENDS THEIR FAVOURITE PRODUCTS.
BEN MARSHALL'S PICK

REPS'
corner

Although I love the capabilities of an App-controlled, multi-zone audio system like MusicCast or HEOS, sometimes you just want the simplicity of music through a few rooms. Think small businesses, doctors' and dentists' offices, retail showrooms, display houses, and through your own home.

If all you want is music playing in four rooms, it's hard to go past the PRO1300. Plug in a music source (phone, tablet, radio, Bluetooth receiver, etc.) and up to four pairs of speakers, and there you go! Each channel has 15 Watts of power at 4Ω, and each has a separate volume control. If you need more zones, it has a loop-through audio output so connect up another PRO1300 and you've got up to eight rooms of audio. Simple and effective.

The PRO1300 does have a bigger sibling: the PRO1323. A PRO1323 does all of the same things but adds a range of different input types. Optical or digital coaxial inputs (e.g. from the output of a TV or CD player), it has. Two analogue audio inputs, it has those too. It even has an input for a dynamic microphone if you want to make an occasional announcement.

Now, these won't blow your hair back with VOLUME, and we've got recommendations for that too. However, for a simple setup, easy to use, four-zone music amplifier, then either the PRO1300 or PRO1323 might just be your jam.

18G HDMI 2.0 MATRIX & SWITCH

With the new "proper" 4K sources hitting the market, like the Foxtel IQ4, the ability to process 18G signals is becoming mandatory. We've had 18G Pro2 leads for around 12 months now, followed by a suite of 18G switches, splitters and fibre optics. The 4x4 matrix and the 3-way splitter are the latest additions to the range!

4X4 HDMI 2.0 MATRIX

The HDMIMX44V18G is ideal for many applications including commercial venues with multiple sources and displays. These inputs and outputs can be controlled by practically any means with IR, RS232 and web (LAN) control. There are digital audio outputs for every source for when the venue is using a separate PA system.

HDMIMX44V18G | 64510365

RSP INC
\$499

3X1 HDMI 2.0 SWITCH

Only a few months ago, we landed our first 18G switch which featured 4-way switching and audio extraction. Expanding the range, the HDMI3S18G switch is a simple 3-way switch with an IR remote. It'll conveniently remember the last selected source.

HDMI3S18G | 64510045

RSP INC
\$79

Ben will be giving us training on this subject on 15th March at Radio Parts (562 Spencer St, West Melbourne).

While we're strongly encouraging customers to "future-proof" and use 18G components, the price differential has meant that we need to also stock low cost alternatives. It has never been more important to understand the difference between these products!

TERMS & CONDITIONS Product features and pricing in this newsletter are subject to change without notice. Special promotional prices advertised here are valid for the month the newsletter has been published. However, some offers may commence or extend beyond the length of the promotion. Availability and pricing of products are offered on a while stocks last basis. Most products have been photographed in-house and are identical to what you will receive, but manufacturers may make improvements during the life of a product without notice and this may result in a slightly different design. If certain product features are important, please contact our sales department for confirmation before ordering the product. Information presented in this newsletter has been checked and is believed to be correct at the time of printing, however, errors and omissions are excepted. Radio Parts can not guarantee prices, specifications, or features of a product that may change after printing. Radio Parts reserves the right to correct printing errors. *Device displayed to demonstrate purpose of product may not be included—please check with Radio Parts where unsure.
